MULTINATIONAL OPTIONS

The majority of our products can be specified with a choice of international mains power sockets. However, USB is fast becoming the standard for powering portable equipment, which is why we also have a range of high-power USB chargers available, as well as Qi wireless, alongside a range of Data and AV options.

WHAT'S NEW?

2024 saw the arrival of PIP² and PIP³, our first units to utilise up to 60% recycled post-consumer plastic. We also added a new offering to our TUF USB charger range, introducing two TUFs with two USB-C ports (rather than the USB-A, or USB-A & USB-C of previous models). We also increased our standard warranty from one year, to ten years! (see Page 42 for further details)

OE is expanding its global footprint, driving sales growth worldwide.

With two state-of-the-art manufacturing facilities in Sydney, Australia, and Wakefield, UK, we're equipped to support our ever-growing network of distributors and dealers across the globe. Our dedicated U.S. distributor and permanent distribution office in Germany ensure reliable support and efficient service in every region.

Our commitment to innovation in advanced USB charging technology means we're making high-quality charging accessible to everyone, everywhere.

PLUTO remains one of our most popular units; and can be finished in a variety of colours, patterns, and textures. Click or scan the QR code for more information on our customisation options.

UPDATED WARRANTY

What does this mean for you?

WARRANTY

OE products specified with AC sockets are now warranted for 10 years. Where OE products incorporate both AC and DC components, only the AC components are warranted for 10 years and the DC components warranted for 2 years.

AC vs DC

WHAT IS AN AC COMPONENT?

An 'AC component' is a conventional power outlet that is powered by alternating current. This includes international power sockets from our 42mm modular components range.

WHAT IS A DC COMPONENT?

A 'DC component' is something that is powered by or enable direct current power such as:

- PSU
- PCBs
- Batteries
- USBs

TERMS:

Report any suspected product failure to OE promptly via email. OE will assess the issue and may require returning the goods for investigation. Upon confirmation of a covered fault, OE will repair or replace the product at no cost. OE will repair or replace, at its own option, those parts which are confirmed as defective by OE within the above warranty periods. Replacement parts are covered only for the remaining warranty period. Claims must be made in writing within 60 days after the warranty period ends.

Effective on purchases made after April 23rd 2024.

Read full warranty terms here:
